

## Motorcycle Handlebar End Caps Installation Instructions

### Components

Handlebar end cap  
Threaded collar  
Expansion ring  
Washer

- Step 1:** On clutch lever side, cut off end of hand grip with sharp tool, making edge of grip even with end of handlebar.
- Step 2:** On throttle side, cut off end of hand grip and throttle tube, make sure end of grip/throttle tube is set back from end of handle bar approx. 1/32 inch. This will insure clearance between bar end cap and grip/throttle tube assembly.
- Step 3:** Insert Bar end cap into end of handle bar to gauge the amount of adjustment required for snug fit.
- Step 4:** Remove bar end cap, tighten threaded collar to expand plug enough to fit snugly inside the handlebar.
- Step 5:** Once bar ends have been installed, twist outer diameter clockwise a few times to help snug up the fit as tight as possible.
- Step 6:** Verify that throttle tube assembly works correctly and there is no interference with bar end.
